

DOWNTOWN TREE MANAGEMENT

WHAT WE DO:

Within the downtown, the City of Cheyenne Urban Forestry Division (CUFD) is responsible for the planting and maintenance of trees within the public right-of-way. This includes most trees within the sidewalk and along the street.

Our goal is to work with business and property owners to expand and improve the forest canopy to enhance the vitality of the downtown. We encourage owners to contact us for the following:

- Planting, including planting within existing openings and cutting openings in the concrete to accommodate trees.
- Pruning to improve clearance, visibility and safety.
- Mulching to provide protection for the roots and a safe walking surface.
- Removal of dead, dying or hazardous trees for safety.
- Assessments, including health checks, insect and disease identification and hazard assessments.

We are dedicated to improving Cheyenne's urban forest by fostering a safe, healthy, and diverse tree canopy to enhance the beauty and prosperity of Cheyenne's Downtown!
